

Task 1 – Human Rule Formalization of §47 MBO using the RASE Methodology

1. Introduction

Explain the RASE methodology, its purpose in rule formalization, and why legal regulations can be transformed into machine-readable representations.

2. Description of the Selected Clause

Present §47 and explain the main topics: habitable rooms, ceiling heights, attic rooms, and building class exceptions.

3. Manual RASE Analysis

Analyse Sentence 1, Sentence 2, and Sentence 3. Identify Applications, Requirements, Selections, and Exceptions.

4. Interpretation Challenges

Discuss difficult parts of the clause, including the attic-room rule and the 1.50m measurement statement.

5. Expert Feedback Integration

Document Nick's feedback and explain how the final interpretation changed after review.

6. Final RASE Model

Provide the final structured RASE table containing Applications, Requirements, and Exceptions.

7. Machine-Readable Rules

Transform the clause into IF/THEN logic rules suitable for computational interpretation.

8. Final HTML Annotation

Include screenshots, exported HTML, and the final validated annotation.

9. Reflection and Preparation for Task 2

Explain how the manual annotation serves as the ground-truth reference for LLM evaluation.
